

Programming for Network Engineers (PRNE) V2.0

***WHERE GREAT TRAINING
HAPPENS EVERYDAY!***

Programming for Network Engineers (PRNE) V2.0

Course Duration

4 days

Course Price

\$3,595.00

36 CLCs

Methods of Delivery

In-Person ILT

Virtual ILT

Onsite ILT

About this Class

The Programming for Network Engineers (PRNE) V2.0 course is designed to equip you with fundamental skills in Python programming. Through a combination of lectures and lab experience in simulated network environments, you will learn to use Python basics to create useful and practical scripts with Netmiko to retrieve data and configure network devices. Upon completion of this course, you should have a basic understanding of Python, including the knowledge to create, apply, and troubleshoot simple network automation scripts.

Programming for Network Engineers (PRNE) V2.0

How you will benefit

This class will help you:

- Explain the need for network engineers to learn how to program
- Explain how programming relates to the journey into network automation and programmability
- Create useful and practical scripts to retrieve data and configure network devices
- Create, apply, and troubleshoot simple network automation scripts
- Gain hands-on experience with Python programming

Why Attend with Current Technologies CLC

- Our Instructors are the top 10% rated by Cisco
- Our Lab has a dedicated 1 Gig Fiber Connection for our Labs
- Our Labs run up to Date Code for all our courses

Who Should Attend

The job roles best suited to the material in this course are:

- Network Administrators
- Network Engineers with little or no programming or Python experience
- Network Managers
- Systems Engineers

Programming for Network Engineers (PRNE) V2.0

Objectives

After taking this course, you should be able to:

- Create a Python script
- Describe data types commonly used in Python coding
- Describe Python strings and their use cases
- Describe Python loops, conditionals, operators, and their purposes and use cases
- Describe Python classes, methods, functions, namespaces, and scopes
- Describe the options for Python data manipulation and storage
- Describe Python modules and packages, their uses, and their benefits
- Explain how to manipulate user input in Python
- Describe error and exception management in Python
- Describe Python code debugging methods

Programming for Network Engineers (PRNE) V2.0

Course Outline

Module 1: Introducing Programmability and Python for Network Engineers

Module 2: Scripting with Python

Module 3: Examining Python Data Types

Module 4: Manipulating Strings

Module 5: Describing Conditionals, Loops, and Operators

Module 6: Exploring Classes, Methods, Functions, Namespaces, and Scopes

Module 7: Exploring Data Storage Options

Module 8: Exploring Python Modules and Packages

Module 9: Gathering and Validating User Input

Module 10: Analyzing Exceptions and Error Management

Module 11: Examining Debugging Methods

Programming for Network Engineers (PRNE) V2.0

Lab Outline

- **Lab 1: Execute Your First Python Program**
- **Lab 2: Use the Python Interactive Shell**
- **Lab 3: Explore Foundation Python Data Types**
- **Lab 4: Explore Complex Python Data Types**
- **Lab 5: Use Standard String Operations**
- **Lab 6: Use Basic Pattern Matching**
- **Lab 7: Reformat MAC Addresses**
- **Lab 8: Use the if-else Construct**
- **Lab 9: Use for Loops**
- **Lab 10: Use while Loops**
- **Lab 11: Create and Use Functions**
- **Lab 12: Create and Use Classes**
- **Lab 13: Use the Python main() Construct**
- **Lab 14: Traverse the File Structure**
- **Lab 15: Read Data in Comma-Separated Values (CSV) Format**
- **Lab 16: Read, Store, and Retrieve Data in XML Format**

Programming for Network Engineers (PRNE) V2.0

Lab Outline Cont.

- **Lab 17: Read, Store, and Retrieve Date in JavaScript Object Notation (JSON) Format**
- **Lab 18: Read, Store, and Retrieve Data in a Raw or Unstructured Format**
- **Lab 19: Import Modules from the Python Standard Library**
- **Lab 20: Import External Libraries**
- **Lab 21: Create a Python Module**
- **Lab 22: Prompt the User for Input**
- **Lab 23: Use Command-Line Arguments**
- **Lab 24: Manage Exceptions with the try-except Structure**
- **Lab 25: Manage Exceptions with the try-except-finally Structure**
- **Lab 26: Use Assertions**
- **Lab 27: Use Simple Debugging Methods**
- **Lab 28: Use the Python Debugger**
- **Lab 29: Code a Practical Debugging Script**
